

Table 1: Reconstruction Error and Accuracy by ROI and Group with Representative Examples

| ROI        | Group          | Mean Error       | Acc@45° (%)    | Example                                                                               |
|------------|----------------|------------------|----------------|---------------------------------------------------------------------------------------|
| <b>V1</b>  | <b>Non-CVD</b> | 46.7° (SD 17.0°) | 59.6 (SD 25.1) |    |
|            | <b>CVD</b>     | 42.4° (SD 4.9°)  | 67.6 (SD 18.0) |    |
| <b>V2</b>  | <b>Non-CVD</b> | 56.9° (SD 16.8°) | 50.0 (SD 21.8) |    |
|            | <b>CVD</b>     | 55.3° (SD 5.1°)  | 40.9 (SD 3.8)  |   |
| <b>V3</b>  | <b>Non-CVD</b> | 82.8° (SD 14.1°) | 27.9 (SD 5.1)  |  |
|            | <b>CVD</b>     | 78.9° (SD 7.5°)  | 28.7 (SD 2.9)  |  |
| <b>hV4</b> | <b>Non-CVD</b> | 82.1° (SD 4.6°)  | 27.5 (SD 1.5)  |  |
|            | <b>CVD</b>     | 76.3° (SD 3.9°)  | 29.6 (SD 1.5)  |  |

Note: ANOVA config32\_determin analysis results. Non-CVD examples from Sub-06; CVD examples from Sub-08. Example images show pure circular reconstruction plots (all text removed).

Table 2: K5 Permutation Validation Results (k=5 ANOVA Feature Selection)

| Group   | Before Permu | After Permu | Error Change | Effect Size (d) | p-value |
|---------|--------------|-------------|--------------|-----------------|---------|
| Non-CVD | 78.0°        | 81.9°       | +3.86°       | 0.27            | 0.03    |
| CVD     | 79.0°        | 83.7°       | +4.70°       | 0.42            | 0.01    |

\*  $p < 0.05$  (significant)

Note: Both groups show significant validation ( $p < 0.05$ ), indicating that the k=5 ANOVA feature selection successfully identifies informative voxels beyond chance.
