

Table 1: Reconstruction Error and Accuracy by ROI and Group with Representative Examples

		V1	V2	V3	hV4
Non-CVD	Mean Error	46.7° (SD 17.0°)	56.9° (SD 16.8°)	82.8° (SD 14.1°)	82.1° (SD 4.6°)
	ACC-45 (%)	59.6 (SD 25.1)	50.0 (SD 21.8)	27.9 (SD 5.1)	27.5 (SD 1.5)
	Example				
CVD	Mean Error	42.4° (SD 4.9°)	55.3° (SD 5.1°)	78.9° (SD 7.5°)	76.3° (SD 3.9°)
	ACC-45 (%)	67.6 (SD 18.0)	40.9 (SD 3.8)	28.7 (SD 2.9)	29.6 (SD 1.5)
	Example				

Note: ANOVA config32_determin analysis results.
Non-CVD examples from Sub-06; CVD examples from Sub-08.
Empty image cells provided for manual insertion of cropped circular plots.

Table 2: K5 Permutation Validation Results (k=5 ANOVA Feature Selection)

Group	Before Permu	After Permu	Error Change	Effect Size (d)	p-value
Non-CVD	78.0°	81.9°	+3.86°	0.27	0.031*
CVD	79.0°	83.7°	+4.70°	0.42	0.011*

* $p \leq 0.05$ (significant)
Note: Both groups show significant validation ($p \leq 0.05$), indicating that the k=5 ANOVA feature selection successfully identifies informative voxels beyond chance.
