

Table 1: Reconstruction Error and Accuracy by ROI and Group with Representative Examples

ROI	Group	Mean Error	Acc@45° (%)	Example
V1	Non-CVD	46.7° (SD 17.0°)	59.6 (SD 25.1)	
	CVD	42.4° (SD 4.9°)	67.6 (SD 18.0)	
V2	Non-CVD	56.9° (SD 16.8°)	50.0 (SD 21.8)	
	CVD	55.3° (SD 5.1°)	40.9 (SD 3.8)	
V3	Non-CVD	82.8° (SD 14.1°)	27.9 (SD 5.1)	
	CVD	78.9° (SD 7.5°)	28.7 (SD 2.9)	
hV4	Non-CVD	82.1° (SD 4.6°)	27.5 (SD 1.5)	
	CVD	76.3° (SD 3.9°)	29.6 (SD 1.5)	

Note: ANOVA config32.determin analysis results. Non-CVD examples from Sub-06; CVD examples from Sub-08. Example images show cropped circular reconstruction plots (left panel only).

Table 2: K5 Permutation Validation Results (k=5 ANOVA Feature Selection)					
Group	Before Permu	After Permu	Error Change	Effect Size (d)	p-
Non-CVD	78.0°	81.9°	+3.86°	0.27	0.
CVD	79.0°	83.7°	+4.70°	0.42	0.

* $p \leq 0.05$ (significant)

Note: Both groups show significant validation ($p \leq 0.05$), indicating that the k=5 ANOVA feature selection successfully identifies informative voxels beyond chance.
